

1. Data exploration and visualisation
 - 1.1 Summarise data using descriptive statistics
 - 1.2 Construct and interpret graphical displays
2. Probability theory
 - 2.1 Apply probability axioms and conditional probability
 - 2.2 Use Bayes theorem in actuarial contexts
3. Random variables and distributions
 - 3.1 Identify common discrete distributions
 - 3.2 Identify common continuous distributions
4. Statistical inference
 - 4.1 Construct point estimates and confidence intervals
 - 4.2 Perform hypothesis tests
5. Regression and correlation
 - 5.1 Fit and interpret simple linear regression
 - 5.2 Assess correlation and residual diagnostics
6. Credibility theory
 - 6.1 Apply classical credibility formulae
 - 6.2 Interpret Bayesian credibility updates
