

Official CMP CS1V

Core Reading / CMP - CS1V Actuarial Statistics

Chapter 1 Data exploration

Students should be able to summarise datasets and construct plots.

Learning objective: Describe measures of central tendency.

Chapter 2 Probability

Students should apply probability rules to actuarial problems.

Learning objective: Apply Bayes theorem to update beliefs.

Chapter 3 Distributions

Students should identify and use common probability distributions.

Learning objective: Identify binomial and normal distributions.

Chapter 4 Inference

Students should estimate parameters and test hypotheses.

Learning objective: Construct confidence intervals.

Chapter 5 Regression

Students should fit and interpret linear regression models.

Learning objective: Interpret regression coefficients.
